                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            treating autolimmune diseases

Example 1; Page 19; 41pp; English.

Example 1; Page 19; 41pp; English.

Peptides W33784-98 and W33778-9 were assayed for their immunodulating activity. A peptide-type compound or variant is claimed which has immunomodulating activity, including the N-terminal acylated and/or C-terminal amidated or esterified forms of up to 60 amino acids, where the peptide-type compound comprises the formula; A-B, where A, B = (R a376-77L) (a379-84) or (aa80 = 1 or N; aa81, aa84 = a hydrophobic or Small amino acid; aa82 = R or L; aa83 = G or R; and aa represents amino acid. The sequence in the brackets may optionally be absent or truncated at any peptide type bond within the brackets. The compounds comprise amino acid sequences related to a class I HLA-B alphal domain (positions)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           19-JUN-1998 (first entry)
Peptide B7.84-75-75-84 tested for immunomodulating activity.
Immunomodulating dimer: immunosuppressant drug; CTL activation; transplantation; autoimmune disease; Class I HLA-B alpha-1 domain;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Beulow R, Clayberger C, Krensky AM; wPI; 98-086530/V08. New immunomodulating dimer peptide(s) - based on a Class I HLA-B alpha-1 domain, used for preventing rejection of transplants or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
79-84). They can be used to inhibit cytotoxic T-lymphocytes (CTL) from undesirably attacking cells in a host or in vitro. They can also be used in combination with antigenic peptides or proteins of interest to activate CTLs. They can also inhibit the proliferation of T cells in response to anti-CD3. The peptide can be used for preventing rejection of transplants or for treating autoimmune diseases, e.g. diabetes, rhemmatoid arthritis and lupus erythematosis. The products can also be used for detection and diagnosis.

This sequence corresponds to residues 75-84 of the alpha-1 domain of the class I MHC HLA-B. This sequence, and the peptide fragments represented by R83062-R83085, R83090-R83096 and recipient of a transplant from an MHC unmatched donor. The peptides are administered to a patient in conjunction with a subtherapeutic amount of an immunosuppressant. This is administered to the patient for a limited treatments). The peptides particularly modulate (or inhibit) the activity of the peptides particularly modulate (or inhibit) the sequence 10 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              15-MXY-1996 (first entry)
HLA-B7 CTL modulating peptide (B7.75-84).
Cytotoxic T lymphocyte; CTL; major histocompatibility complex; MHC;
immunosuppressant; graft versus host disorder; transplantation; therapy;
class I MHC; HLA-B7.
                                                                                                                                                                                                                       Mew peptide(s) based on class I HLA antigen domains - used for modulating cytotoxic T-lymphocyte activity towards targets claim 11; Page 54; 61pp; English.
The peptide is used to modulate cytotoxic T-lymphocyte (CTL) activity, either by inhibition or stimulation. It can be used for inhibiting CTL toxicity in transplantations, for inducing CTL activity in parasitic diseases and neoplasia and in studies on viral infection. The peptide can also be used for identifying CTLs which bind to it and removing subsets of CTLs from a T-cell composition. This peptide sequence is more commonly found within larger peptide compounds of not more than 30 amino acids in length.
                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

Treatment of auto-immune disease by admin. of peptide(s) corresp. to major histocompatibility complex antigens - esp. for delaying onset of clinical symptoms of insulin dependent diabetes by modulating Tell madiated attack on target cells

of clinical symptoms of insulin dependent diabetes by modulating Tell mediated attack on target cells

cell mediated attack on target cells

cell mediated attack on target cells

the method of the invention. These sequences are based on a portion of the method of the invention. These sequences are based on a portion of the major histocompatability complex (MHC) class I antigen (see W07510. The method is for affecting the course of an autoimmune disease involving Trcell mediated destruction of tissue in mammals. These peptides are used especially to treat insulin-dependent diabetes

chopy in the classes. Other diseases that can be treated are multiple sclerosis, rheumatoid arthritis, psoriasis, pemphigus vulgaris, slogren's disease, thyroid disease, Hashimoto's thyroiditis, myssthemia gravis, etc. The peptides modulate T-cell mediated attack on autologous target cells and may also reduce inflammation, swelling, and release of cytokines, perforins, granzymes etc. associated with T cell activation.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                       04-AUG-1997 (first entry)

T-cell modulating peptide #4.

T-cell modulating peptide #4.

T-cell modulator: autoimmune disease; tissue destruction; alphal-domain; mammal; major histocompatability complex; MHC class I; antigen; perforin; insulin-dependent diabetes mellitus; multiple sclerosis; inflammation; theumatoid arthritis; psoriasis; pemphigus vulgaris; Sjoyren's disease; thyroiditis; myaschenia gravis; granzyme; autologous target cell; cytokine release; T cell activation; therapy.
                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   19-JUN-1998 (first entry)
Peptide B7.75-84 tested for immunomodulating activity.
Immunomodulating dimer; immunosuppressant drug; CTL activation; transplantation; autoimmune disease; Class I HLA-B alpha-1 domain;
                                                                                        ;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö

amino acid sequences related to a class I HLA-B alphal domain (positions 79-84). They can be used to inhibit cytotoxic T-lymphocytes (CTL) from undesirably attacking cells in a host or in vitro. They can also be used in combination with antigenic peptides or proteins of interest to activate CTLS. They can also inhibit the proliferation of T cells in response to anti-CD3. The peptide can be used for preventing rejection of transplants or for treating autoimmune diseases, e.g. diabetes, rheumatoid arthritis and lupus erythematosis. The products can also be used for detection and diagnosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    HIA-Bw62 CTL modulating peptide (Bw62.60-84).
Yotocoxic T lymphocyte; CTL; major histocompatibility complex; MHC; immunosuppressant; graft versus host disorder; transplantation; therapy; class I MHC; HLA-Bw62.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New peptide(s) based on Class I HLA antigen domains - used for modulating cytotoxic T-lymphocyte activity towards targets modulating cytotoxic T-lymphocyte activity towards targets and lass for terminus English.

The peptide (or a fragment of at least 10 amino acids, joined at at least one terminus to a sequence other than that of wild type HLA antigen) is used to modulate cytotoxic T-lymphocyte (CTL) activity, either by inhibition or stimulation. It can be used for inhibiting CTL toxicity in transplantations, for inducing CTL activity in parasitic diseases and neoplasia and in studies on viral infection. The peptide can also be used for identifying CTLs which bind to it and removing subsets of CTLs from a T-cell composition.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 15-MAR-1994 (first entry)
Peptide fragment of Class I HLA peptide.
Human leukocyte antigen: HLA; peptide; transplantation; neoplasia;
parasitic disease; cytotoxic I lymphocyte; modulation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö

Example 26.84

Example 26.84

Insert passociated antigens. This sequence represents the protein processor of the 25 containing a coverage of the 25 containing a covalently that the heat shock protein HSc70. p74 is annohoteric detergent, and then passed through an affinity column covalently bound HLA-B7702 palindromic peptide.

Compositions comprising the extracellular fragment of p74 combined with HLA-B2702.60-84 (see R95416), induces calcum influx, and inhibits compounds can be screened for their effect on the cytolysis. Candidate compounds can be screened for their effect on the cytolysis. Candidate Compounds can be screened for their effect on the cytolysis. Candidate compound and p74.

Compounds can be screened for their effect on the cytolysis of containing the amount of binding between the candidate compound and p74.

Containing T-cells and antigen presenting cells (APCS), by adding to the mix the extracellular portion of p74, in an amount sufficient to compete containing T-cells and antigen presenting cells (APCS), by adding to the conners.

Containing T-cells and antigen presenting cells (APCS), by adding to the conners.
                                                                                                        Example 13; Page 32; 80pp; English.
R83061-R83085, R83090-R83096 and R92907-R92913 represent fragments of class I major histocompatibility complex (MHC) antigens. This sequence corresponds to residues 60-84 of the alpha-1 domain of the class I MHC ULA-BWG2. These sequences can be used to extend the period of acceptance by a recipient of a transplant from an MHC unmatched donor. The peptides are administered to a patient in conjunction with a subtherapeutic amount of an immunosuppressant. This is administered to the patient for a limited period of time (compared to the lifetime administration for current treatments). The peptides particularly modulate (or inhibit) the settivity of the cytotoxic T lymphocytes (CTLs) of the patient.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             HIA; p74; alphal-helix; human-leucocyte-associated antigen; inhibitor; recal lysate; membrane protein; mammal; heat shock protein; Hsc70; APC; B cell; calcium influx; cytotoxic T lymphocyte; CTL; differentiation; cytolysis; antigen presenting cell.

Compans. comprising lymphoid surface membrane proteins - which may inhibit cytolytic activity and differentiation of CTLs.

Frample, Page 9; 29pp; English.

R95413, and R95415-R95431 represent palindromes and fragments of known leucocyte-associated antigens. This sequence represents the R95413, and R95415-R95431 represent palindromes and fragments of known leucocyte-associated antigens. This sequence represents the HA-BW62.60-84. These sequences can be used to isolate the protein p74 from a T-cell lysate. P74 is a T-cell surface membrane protein p74 from a sective with the heat shock protein Hsc70. P74 from Del isolated by lysis of a suitable cell with an amphoteric detergent, and then passed through an affinity column containing a covalently bound HIA-B2702 palindromic peptide.

Compositions comprising the extracellular fragment of p74 combined with the extracellular fragment of p74 combined with the extracellular fragment of p74 combined with the extracellular portion of p74 and of p74 and of p74 and of p74 and p84 (see R95416), induces calcium influx, and inhibits cytotoxic T lymphocyte (CTL) differentiation or cytolysis. Candidate compounds can be screened for their effect on the cytolysis. Candidate compounds the amount of binding between the candidate compound and determining the amount of binding between the candidate composition containing T-cells and antigen presenting cells (APCS), by adding to the mix the extracellular portion of p74, in an amount sufficient to compete with p74 for the binding of the p74 ligand.
                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                             HIA; p74; alphal-hellx; human-leucocyte-associated antigen; inhibitor; T-cell lysate; membrane protein; mammal; heat shock protein; Hsc70; APC; B cell; calcium influx; cytotoxic I lymphocyte; CTL; differentiation; cytolysis; antigen presenting cell.

HIA-B35 gene - used in DNA probe and transformant cells for immunising animals, for developing monoclonal antibody.

Claim 1; Page 1; 11pp; Japanese.

Probes comprising part of the sequence encoding this sequence can be used to identify Class I genes. The DNA can be expressed for immunisation of animals and prodn. of monoclonal antibodies specific for the HIA-B35 antigen. See also J03112485 and J03112487.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel anti-microbial protein from e.g. Macadamia integrifolia useful for controlling microbial infestations of plants or mammals Claim 1: Page 63-65; 96pp; English.

The sequence is that of an antimicrobial protein which can be used to control microbial infestations in plants and mammalian animals.
                                                                                                                                                                                                                                                                                                  ö

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Annotated genes are named to indicate the level of evidence for their annotation. Genes with similarity to other proteins are named after the database hits. Genes without significant peptide similarity but with EST similarity are named as 'unknown' proteins. Genes without protein or EST similarity, that are predicted by more than two gene prediction programs over most of their length are predicted by tRNAscan-SE (Sean Eddy,

e-mail: Xiin@tigr.org
BAC clone F7H1 is from Arabidopsis chromosome II and is near the molecular marker mi398

The orientation of the sequence is from SP6 to T7 end of the BAC
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Submitted (24-APR-1999) The Institute for Genomic Research, 9712

http://genome.wustl.edu/eddy/tRNAscan-SE/). Simple repeats are identified by repeatmasker (Arian Smit, http://ftp.genome.washington.edu/RW/RepeatMasker.html). Regions of genomic sequence that are not annotated as genes but have predicted exons by GRAIL are annotated as misc features.
                                                                                                                                                                                                                                                                                                                                                                                                        /note="8353 nt before this point were not included in the submitted sequence, due to overlap with another BAC" complement(1. .4157)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 PAAFQVSEITQSPSMDPTVCYVQNGPNKGRPICSFYNRVGHIAERCYKKHGFPDGFTP
